U.S. Patent and Trademark Office PTOL-303 (Rev. 11-03) Continuation of 2. NOTE: The added claims raise new issues that will require further search and consideration. Specifically, newly added claim 38 requires "a listening socket bound to a wildcard network interface," and using the listening socket to for connection. This limitation is not included in the previously presented claims and will require further search and consideration.

Further, the applicant's arguments filed along with the unentered amendment have been considered but are not persuasive. First, the applicant argues that the reference to Nagaoka et al. (USPN 6,574,656) fails to teach systems that are within the server device to which access is being controlled. The argument is not persuasive because in figure 1 of Nagaoka et al. (USPN 6,574,656), it is clear that servers provide services to which authorization is required. Second, the applicant argues that the reference does not teach a server device with a user side portion and a kernel side portion and that the Examiner is apparently basing an assertion on his own personal knowledge. The assertion posed in the previous action was not based on personal knowledge, as stated in paragraph 2 of the Final rejection, that assertion was based on the definition provided by the applicant. As defined by the applicant, the Nagaoka et al. (USPN 6,574,656) reference does not teach that the client device information is accepted only if the client device information has been provided via a specific network. Nagaoka et al. (USPN 6,574,656) clearly teaches this as pointed out in column 8, lines 46-55 as applied in the previous office action.
